

# The specialisms of Pure Water

## Water softening

Every family in the Netherlands has to do with scale. There are several products on the market to make this "invisible". These are products which doesn't remove the scale permanently but temporary. This because the scale is always in your water due to your normal water pipe. Except irritation and a lot of work you have to do to make that scale "invisible", it costs a lot of money. Not only in straight term, because you have to buy all of these decalcify products, but also your kitchen device which lifetime decreases, because of the scale inside. There are a several solutions, but the solution which works the best and is affordable is to softening your water at the point where the water enters your house. Would you like to know more about water softening? Please contact us for all the possibilities.

The purchase of a water softening system is a tough investment. Would you like to experience how it feels to shower en bath in softened water, you could choose a douche filter. Say goodbye to scale and chlorine in your shower and bath. The douche filter removes scale, chlorine and other blemished materials like steel, arsenic, mercury, filth, sediment and smell. The result: a softer skin, less skin eruption, irritations and healthier hear. Another profit is that your bath/shower doesn't have scale anymore, so you don't have to clean up so intensive. The product life of one patternfilter is about 6 till 8 months, you could change it easily with a refill filter.

## Water purification

Notwithstanding that the water supply company take care to make a good product, there still remains pollution in our consumption water. Because they work negative on our health and functionality, it's good to purify your consumption water with a system that's based on reverse osmosis by which you are assured of high quality consumption water at the place where you use the water often. That there are also a several benefits enclosed, is a lucky coincidence!

As well, we get more questions to adjust the water systems to the family situation or the situation at your business, thinking of depot possibilities, faucet types and the capacity of the system. So, would you like to know more about the possibilities, please contact us.

## Water enrichment

After the tapwater has been purified by the water purification system, the water is "empty". The insertion capacity for nutrient and waste materials is on the highest point now. On normal circumstances and by the average person, this is the most optimal support for your physical functions. Anyway, there are situations in which people think that if you add materials or you give the water a separate treatment, the water could support your body much better.

Thinking of active people who need some extra minerals in a short time or if people have a lot of fluid loss due to other reasons. Also people who have physical symptoms and elderly people, for those people it's important that the water is pH positive. By placing of special filters just after your water purification system it's possible to provide your water with extra organic minerals or salts, to make it pH positive or ionize it for your aquarium.

- Alkaline filter:** rise of the pH value
- Mineral filter:** addition of extra organic minerals
- Ionize filter:** removing all the ions
- Infrared filter:** positive result on your health
